Module 4.3 Assignment

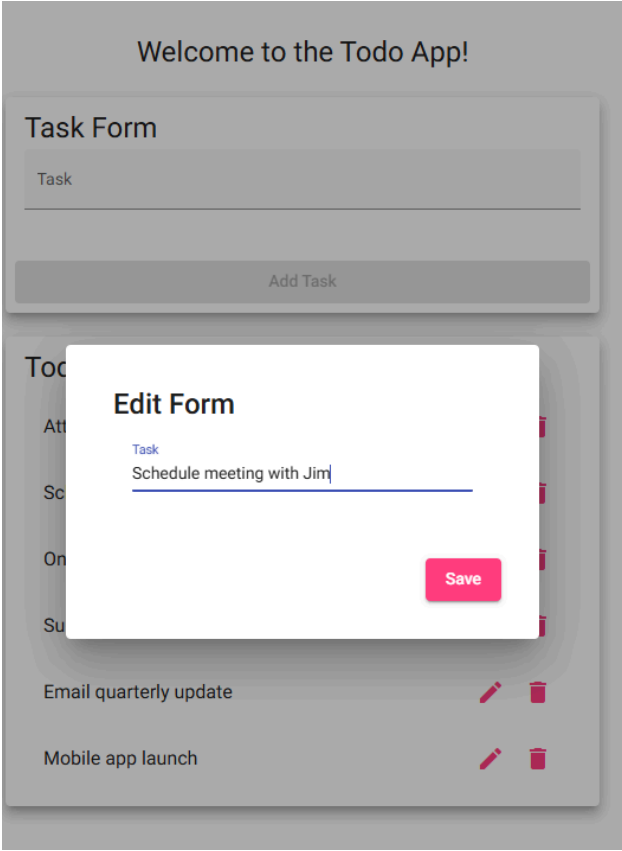

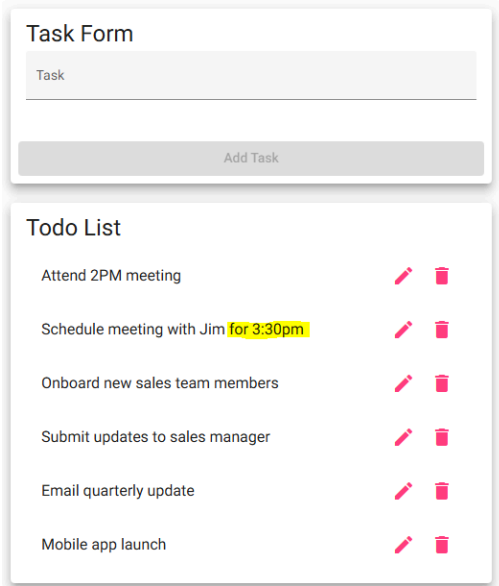

Test 1:

Test 2	Deleting a To Do List Item			
	Test Objective: Verify that users can delete a to do list item	Developer: Sarah Ewing Date tested: 2024-11-13	Peer tester: Bryan Cabrera Date tested: 2024/11/15	
Step	Action	Expected results:	Developer pass/fail	Tester pass/fail
1	Visit https://buwebdev.github.io/todo/	The page loads without errors	yes	Yes 
2	Click on the Trash Can icon to the right of one of the tasks	The task to the left of the Trash Can icon disappears	yes	Yes

				<div><div>Welcome to the Todo App!</div><div><div>Task Form</div><div><div>Task</div><div>Add Task</div></div></div><div><div>Todo List</div><div><div>Attend 2PM meeting</div><div><div></div><div></div></div></div><div><div>Schedule meeting with Jim</div><div><div></div><div></div></div></div><div><div>Onboard new sales team members</div><div><div></div><div></div></div></div><div><div>Submit updates to sales manager</div><div><div></div><div></div></div></div><div><div>Email quarterly update</div><div><div></div><div></div></div></div><div><div>Mobile app launch</div><div><div></div><div></div></div></div></div></div>
3	Verify that the item no longer appears in the list of to do tasks	The deleted task is removed from the list	yes	<div><div>Yes</div><div><div>Welcome to the Todo App!</div><div><div>Task Form</div><div><div>Task</div><div>Add Task</div></div></div><div><div>Todo List</div><div><div>Attend 2PM meeting</div><div><div></div><div></div></div></div><div><div>Schedule meeting with Jim</div><div><div></div><div></div></div></div><div><div>Onboard new sales team members</div><div><div></div><div></div></div></div><div><div>Submit updates to sales manager</div><div><div></div><div></div></div></div><div><div>Email quarterly update</div><div><div></div><div></div></div></div></div></div></div>
Comments	Every test step worked as intended with the necessary screenshots attached as proof. I think a temporary message(pop-up type message) with confirmation that an item was deleted would be beneficial for the user to see. Furthermore, an “undo” button would be great as well in order for users to be able to undo a recent deletion in case they didn’t mean to.			

Test 2:

Test 2	<h1>Edit to do task item</h1>			
	Test Objective: Allow the user to edit an existing task item	Developer: Mason Date tested: 2024/11/14	Peer tester: Bryan Cabrera Date tested: 2024/11/15	
Step	Action	Expected results:	Developer pass/fail	Tester pass/fail
1	Go to URL landing page	Page loads correctly without errors	Yes	<div>Yes</div> <div><div>Welcome to the Todo App!</div><div><div>Task Form</div><div><input type="text" value="Task"/></div><div>Add Task</div></div><div><div>Todo List</div><div><div>Attend 2PM meeting</div><div></div></div><div><div>Schedule meeting with Jim</div><div></div></div><div><div>Onboard new sales team members</div><div></div></div><div><div>Submit updates to sales manager</div><div></div></div><div><div>Email quarterly update</div><div></div></div><div><div>Mobile app launch</div><div></div></div></div></div>

2	Click the edit button	The task has a textbox for editing	Yes	Yes	
3	Make a change and save	Task is updated in the list	Yes	Yes	

Comments	The URL loaded up correctly with no errors. Furthermore, clicking the pencil icon allowed for editing of the given list item. Clicking Save on the todo list item saved it to the main page with the changes that were made. No undo button recommended for this feature as a user can always re-edit the given task. Perhaps another pop-up message saying that the task was updated would be beneficial for users to have that confirmation.
