Module 5.2 Assignment

Estimated Average Flow Time

Early morning Homework	120 minutes
Lunch	60 minutes
Afternoon Homework/Study	240 minutes
Dinner/Video games	240 minutes

Productive time = 360 minutes

Results Analyzed: -As 360 minutes is being dedicated to productive activities out of the total 660 minutes this means I'm being productive about 54% of the time. Immediately this tells me that

more time can be better organized in order to be more productive. While my homework goal are being met as I submit assignments on time, by being more productive I could end up submitting assignments earlier and therefore have more time to study.

Possible next steps: -Shortening lunch to 30 minutes instead of 60 can give me extra time in the morning or right after lunch to get ahead with homework. Furthermore Dinner/Video game time at 240 minutes might be a little excessive as this time can definitely be cut down in order to give myself more time for homework/studying. Ultimately I could free up a lot more time that I could in turn dedicate to finishing homework earlier and/or studying other software development practices.
